

# JACOBIAN EXAMPLE

$$Q = \int_0^1 \int_0^{1-x} \sqrt{x+y} (y-2x)^2 dy dx = ?$$

Try  $u = x+y$   
 $v = y-2x$  Solve for  $x$  &  $y$

$$u - v = 3x \Rightarrow x = \frac{1}{3}(u - v)$$

$$2u + v = 3y \Rightarrow y = \frac{1}{3}(2u + v)$$

COMPUTE  
JACOBIAN

$$J = \begin{vmatrix} \frac{1}{3} & -\frac{1}{3} \\ \frac{2}{3} & \frac{1}{3} \end{vmatrix} = \left( \frac{1}{9} + \frac{2}{9} \right) = \frac{3}{9} = \frac{1}{3}$$

Determine corresponding region in  $uv$  space

Boundary of  $R$

$$x=0 \Rightarrow u=y \text{ \& } v=y \therefore u=v$$

$$y=0 \Rightarrow u=x \text{ \& } v=-2x \therefore v=-2u$$

$$x+y=1 \Rightarrow u=1$$

Jacobian

$$\Rightarrow Q = \int_0^1 \int_{-2u}^u u^{1/2} v^2 \frac{1}{3} dv du$$

$$= \int_0^1 u^{1/2} \frac{1}{9} v^3 \Big|_{-2u}^u du = \int_0^1 \frac{1}{9} (u^{7/2} + 8u^{7/2}) du \quad v=-2u$$

$$= \int_0^1 u^{7/2} du = \frac{2}{9} u^{9/2} \Big|_0^1 = 2/9$$
