

How can you take a linked list and reverse it? This is a classic data structures question for interview candidates and so I want you to give it a try. Take the given starter code listed with this assignment and add in the code needed to reverse the linked list. Your algorithm should complete in linear time and should not require you to build a second list.

All programs must include a comment section at the top of the program as outlined below:

```
/******  
    Program:    <name of program>  
    Author:     <your name>  
    Date:       <date you finish the program>  
    Time spent: <total amount of time spent on the project>  
    Purpose:    The purpose of this program is to blah blah blah  
*****/
```
