

Homework Set #4

1. (10 points) Problem 6.1-2 (page 129)
2. (10 points) Problem 6.4-1 (page 136)
3. (40 points) Problem 6-2 (page 143)
4. (10 points) Does the tree on the right represent a MAX HEAP?
Why or why not?

4. (20 points) Given the array **A** = < 22, 98, 17, 6, 34 >
 - (a) Illustrate the operation of **HeapSort** using Figure 6.4 on p. 137 as a model. Sort the numbers into non-decreasing order.
 - (b) A swap is an exchange of two elements in the array: $A[i] \leftrightarrow A[j]$.
How many swaps are performed by **HeapSort** to sort the array **A**? Note: Include the swaps used to build the heap.
