<u>Final Project - Checkpoint</u>

As a team, please submit a narrative discussion of what you have accomplished.

You will also submit data or code files (or any other intermediate work products) as part of your progress.
Also, you will submit an updated schedule, discussing what will be ready for the final deliverable. Please tabulate this clearly.

Details Submit an archive (.zip, tar.gz etc) with the following materials.
1. A PDF file that contains the following:
    a. A discussion of approximately 300 to 500 words explaining what you have accomplished so far in the project. This is should be completed as a TEAM, in the report, please include exactly what each member has done.
    b. A revised schedule for completion, given what you have learned and where the project is now. The revised schedule should include what you said you would do by this point, and how it has changed.
    c. The revised schedule must include targets for what will be delivered at the Project Completion on Tue Dec 11th.

2. A txt file that is an index or overview to code or data that you are submitting. It should list the files that you are submitting, and include a sentence briefly explaining what each thing is. Note the provenance of each file—did you author it, or is it from somewhere else? Who on your project team authored it?

3. The code and/or data sets which present your work.
    a) Include the actual files.
    b) If you have more than 5 MB of material (when compressed), host it elsewhere and include a URL for downloading in the txt file noted above.
    c) If you are using a repository like Github, you are welcome to give a pointer to your work there. However, you still must prepare the index file noted above (and submit that), and you must snapshot your work so that you give me a pointer to your work precisely as it existed at the time of submission. In other words, providing merely the URL to the top of your repo is not acceptable.

Note:
    A. This is a team project so, I expect that the team confers with each other in order to be able to analyze what exactly have been achieved so far. The log file (#2 index file) must clearly identify the teammate who was primarily responsible for each item.
    B. In lieu of submission, I am happy to allocate 15 minutes or so to see how far you have gone with the project and you can then have an opportunity to ask questions that you might have (In this case, email me in advance to secure a time-slot.).
