Hi Everyone!

The Fall Career Fair is tomorrow so I wanted to pass along some logistical information as well as suggested companies.

- You can find a full list of companies on the attached *(subject to change)*. You can also filter by major and position type on the Career Services website. I suggest searchin both "internship" and "co-op".
- Wear your suit, print several copies of your resume, and bring your student ID. You will be asked to swipe in upon entering the Fair.
- Review the attached Career Fair Prep slides for sample booth speeches. Consider what makes YOU unique? Perhaps a project you are working on, something you'r learning in your free time, a previous internship experience, the fact that you are working on research with a professor, or an interesting class you're taking relevant to major.
- Do your research!
  - Pinpoint 5-10 companies you want to visit and then another 5-10 you will visit if you have enough time. Check out CareerLINK and company websites to see they have jobs posted. If they do, apply! If they don't, you now have something to ask about at the fair.
  - Below you will see a list of suggested companies for CS majors and any insights I have. This is not all inclusive, but I hope it will be a helpful starting point.
- If you are looking for summer internships, be sure to ask companies when they recruit for summer and what positions they typically have available. Also, ask wher they typically post. This will help you do some homework for next semester if you are still seeking.

If you need assistance at the Fair, you can stop by the Info Desk in the Student Hospitality area. This is also a good area to take notes, regroup, get some water, and figure out who t see next. I hope to see all of you at some point – good luck!

Catherine
